

oSa® – Competence centre for safety of abrasives

Our organisation is globally committed to all topics and requirements relating to safety in grinding processes.

We continuously cooperate with national and international organisations and dedicate our activities in relevant bodies to the further development of safety criteria and higher quality assurance. Thus we can continuously improve our technical test criteria and react promptly to the newest developments in abrasive tool safety.

We will be glad to inform and advise you on all topics relating to accident prevention and provide information and support on accident-preventing measures in grinding.

Organization for the Safety of Abrasives

The Symbol of Safety

YOUR SAFETY. YOUR ADVANTAGE.

Benefit from oSa®-labelled abrasives for your craft enterprise

- You can rely on high-safety abrasive products
- You protect your worker's health
- You optimise labour productivity

Organization for the Safety of Abrasives

The Symbol of Safety

SECURE YOUR ADVANTAGE. TURN TO SAFER ABRASIVES.

The 7 verifiable criteria for oSa®-safety:

- Voluntary self-commitment of the manufacturer
- Test machines and test competence in-house at the manufacturer
- Certified quality management system with documented processes
- Independent testing of products
- Independent safety audit by external auditors
- Regular safety checks and monitoring of production
- Safety by traceability of the product to the manufacturer

The oSa®-trademark – the symbol of tested safety

Put your trust in the oSa®-trademark. Tested quality abrasive products with the highest possible safety level can be identified by means of the worldwide protected oSa®-trademark. Products with the oSa®-trademark provide the highest quality and highest protection of health and safety at work. This is because the right to use the oSa®-trademark is only granted to companies that have voluntarily undertaken to comply with the European Safety Standards for Abrasives and further, more stringent regulations for manufacturing and testing.

Highest protection for the end-user – higher safety for your company

Safety requirements for abrasives are not yet globally binding. However, abrasive products of an uncertain safety level represent a serious danger to life and limb of your staff, and a considerable risk for you: In the event of an accident not only the reputation of your company is at stake, but also the motivation of your staff and as a consequence the productivity at work.

With the objective oSa®-standards you are on the safe side

Trust in oSa®-safety and join us in setting a sign against tools of an uncertain safety level. oSa® stands for responsibility in international trade and for proven safety for the end-user and for the productivity in your company.
